

BRIGHT MOTORS

Sales Performance Analysis

Prepared by: Ditshabako Violet Maruoa | 2015–2016 Dataset

548,400 units · \$7.5B revenue · 10 states

AGENDA

01

Executive Summary

Key metrics and overall business health

02

Revenue Analysis

Monthly trends, top states, top models

03

Profitability Review

Profit by month, make & model margins

04

Sales Volume

Units sold by model and time of day

05

Key Issues

Critical findings impacting performance

06

Recommendations

Strategic actions to improve sales

Executive Summary

\$7.5B

Total Revenue

Across 10 states

548K

Units Sold

548,400 vehicles

-\$87M

Total Profit

Net loss overall

FL #1

Top State

\$1.14B revenue

⚠ The business is generating revenue but operating at a net loss — indicating cost and pricing issues that need urgent attention.

Monthly Revenue Trend

Top 10 States by Revenue

Total Revenue by Model (Top 10)

Monthly Profit Analysis

All months are running at a loss. Worst months: January (-\$25.3M) and May (-\$17.7M)

Profit Margin by Car Make

Units Sold — Model & Time of Day

94% of sales happen in the morning — a major opportunity gap for afternoon/evening

Profit Margin by Model

Key Issues Identified

Persistent Net Losses

The business lost \$87.5M overall. Every recorded month shows negative profit — indicating costs consistently exceed revenue.

Extreme Revenue Seasonality

April (\$14.6M) and July (\$21.8M) are critically underperforming vs. February (\$2.18B). 29× variation is unsustainable.

Low-Margin Brands Dominate

Mercedes-Benz and Rolls-Royce — premium brands — are generating negative margins, suggesting poor cost control or buying above MMR.

Sales Heavily Morning-Skewed

94% of units sold in the morning. Afternoon (5.5%) and Evening (0.4%) represent massive untapped selling windows.

Geographic Concentration Risk

FL and CA alone represent 29% of total revenue. Only 10 states served — limiting national growth potential.

Strategic Recommendations

01

Restructure Pricing & Cost Controls

Audit buying prices against MMR for Mercedes-Benz and Rolls-Royce. Set a minimum profit margin threshold of 5% per sale.

04

Scale High-Margin Models

Prioritise inventory of RX 330, H2 SUT, and 4 Series — consistently the highest-margin models. Reduce low-margin vehicle stock.

02

Seasonal Campaign Strategy

Launch targeted promotions in April and July (historically dead months). Introduce financing incentives and fleet deals to boost slow periods.

03

Extend Sales Hours

Invest in afternoon/evening sales staff and digital channels. Test extended dealership hours and online booking to capture the 6% currently left on the table.

05

Geographic Expansion

Identify 5–8 new underserved states. FL and CA are saturated; states like NY, WA, and CO present strong potential for new dealership presence.

Action Priority Matrix

Action	Impact	Effort	Priority
Reprice low-margin brands (Mercedes-B, RR)	High	Low	 Immediate
Seasonal promotions (April & July)	High	Medium	 Immediate
Extend sales hours / evening staffing	Medium	Low	 Short-term
Prioritise RX 330 & H2 SUT inventory	High	Low	 Immediate
Expand to new states (NY, WA, CO)	High	High	 Long-term
Train staff on premium brand pricing	Medium	Medium	 Short-term

Key Takeaways

- Bright Motors is generating strong revenue (\$7.5B) but running at a net loss — profitability is the #1 priority.
- February is the standout month; April and July need targeted intervention to avoid near-zero revenue.
- Florida and California lead in revenue — geographic diversification can reduce concentration risk.
- The Altima, F-150, and Fusion lead volume — align inventory with these proven sellers.
- Morning sales dominate 94% — extending hours is a quick-win for incremental revenue.
- Implementing minimum margin thresholds per sale is the fastest path to profitability.
